

## What we cover

Delivered through an engaging series of presentation, the workshop is accompanied by a thorough, information-rich workbook that will help you act on what you learn after the course is over.

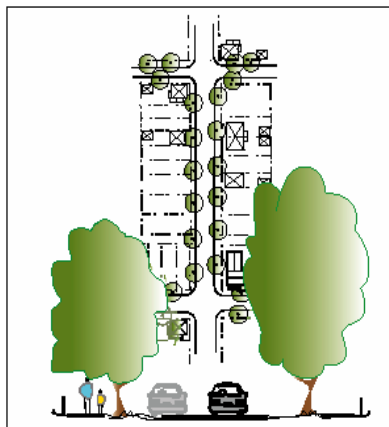

Five different areas are explored:

**What is sustainable development?**

**Transportation, Energy, and Material Management**

**Water, Waste Water, and Storm Water Systems**

**Housing and Community Policy and Regulatory Tools**

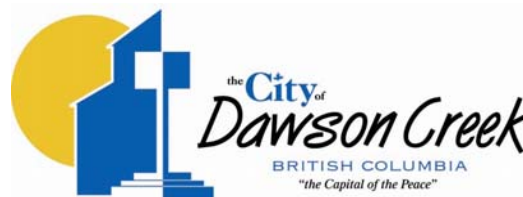

**ustainable  
planning  
workshop**

To register for this free workshop, contact:

**Thursday December 7, 2006**  
**Best Western Hotel,**  
**500 Highway #2**  
**Dawson Creek, BC**  
**9:00 am – 3:30 pm**

What does "sustainability" mean to you?

Sustainability is about meeting the needs of both the present and the future through clear thinking and sound planning.

But your approach to sustainable development depends a great deal on where you are and what your community needs to ensure long-term vitality.

One of the key goals of this workshop is to demonstrate practical approaches to sustainability by highlighting successful activities and practices from smaller municipalities across Canada.

In smaller communities, the need for sustainable development is sometimes less apparent – but the pressures are every bit as real. Population growth or decline, the availability of affordable housing, the increasing age of essential infrastructure, environmental quality concerns and rising costs across the board are among the many pressing issues.

Designed for municipal planners, engineers, and elected officials, Canada Mortgage and Housing Corporation's comprehensive workshop presents practical approaches to addressing long-term infrastructure needs – everything from energy and water to housing and land use – from the perspective of small communities.

*Guest speakers include:*

*Kim Stephens - Program Coordinator,  
Water Sustainability Action Plan for  
British Columbia*

*Gordon Monk - Director of Energy  
Services, Lighthouse Sustainable*
