

## Smart Planning & Living Water Smart: Approaches and Tools for Doing Business Differently in BC

### Convening for Action at the Penticton Forum

TIME	OBJECTIVE	1 - WHAT DO YOU KNOW?	2 - WHAT DO YOU WONDER?	3 - WHAT HAVE YOU LEARNED?	SUMMARY
0800 – 0830	Register, meet and greet				
<b>MODULE A – CREATING OUR FUTURE: WHAT DO WE WANT BRITISH COLUMBIA TO LOOK LIKE?</b>					
0830 - 1000	<b>Participants will be able to:</b> Express what attracted them to attend the Forum and what they hope to take away from the day.	<b>Our objective is to:</b> Assess what the group understanding is by asking: <i>What does 'creating our future' mean to you from your regional perspective?</i>	Participants will be led through a visualization process that connects the dots between actions at the site scale and outcomes at the neighbourhood, watershed and regional scales.	<b>Participants will be asked:</b> How will the provincial policy framework enable you to make 'green choices' that change how land is developed and water is used in your community?	Explain how Module A sets the scene for Modules B and C
<b>MODULE B – DOING BUSINESS DIFFERENTLY: CONVENING FOR ACTION IN THE OKANAGAN</b>					
1030- 1200	<b>Participants will be able to:</b> Express what 'Living Water Smart' means to them and how they will do business differently vis-à-vis land development practices.	<b>Our objective is to:</b> Demonstrate how changes in <i>water use practices</i> can be achieved at the both the basin and site scales through partnerships, collaboration, innovation and integration.	Participants will be shown how Living Water Smart is a green light that enables communities to move forward with implementation of local priorities that achieve 'design with nature' outcomes and create liveable communities.	<b>Participants will be asked:</b> What have you learned from this module that will now help you do what you could not have done before?	Highlight what has been accomplished and bridge to Module C.
<b>MODULE C – DOING BUSINESS DIFFERENTLY: CONVENING FOR ACTION IN THE GEORGIA BASIN</b>					
1245 - 1445	<b>Participants will be able to:</b> Express what "Green Communities" means to them and how they will do business differently vis-à-vis land development practices.	<b>Our objective is to:</b> Demonstrate how changes in <i>rainwater runoff management</i> practices can be achieved at both the watershed and site scales through partnerships, collaboration, innovation and integration.	Participants will be shown how a 'regional team approach' breaks down departmental and jurisdictional silos and shifts the paradigm from boundaries to 'commonalities'.	<b>Participants will be asked:</b> What have you learned from this module that will now help you do what you could not have done before?	Highlight what has been accomplished and bridge to Session D
<b>MODULE D – CREATING OUR FUTURE: THE NATURAL CITY VISION</b>					
1515 – 1615	<b>Participants will be able to:</b> Express what they want BC to look like in 50 years and beyond.	<b>Our objective is to:</b> Provide clarity as to why 'quality of life' is BC's greatest competitive advantage in a changing world, and therefore must be protected and/or enhanced.	Participants will be shown how three lenses – a regional growth strategy, climate change, and quality of life – shape the future of a region when a layered design process is applied.	<b>Participants will be asked:</b> What will you do to achieve the goal of building the world's most attractive, most liveable, and above else, sustainable communities.	Remind everyone that we need to think of ourselves as a team, not as individuals within a silo; and remember to <b>communicate, collaborate, cooperate and coordinate.</b>
